PROJECT PROFILE

Solution was within the project's green guidelines

If you've ever been to Salmon Arm on the majestic Shuswap Lake, you know what a special place it is. Just ask the folks at the local Askew's Supermarket.

To help protect the lake's habitat and save water for other uses, they installed a STORMAWAY Stormwater Management System under their parking lot as part of a mixed-use development incorporating living, shopping and socializing in the same location. AIL's STORMAWAY solution was chosen for its ability to supply such a large reservoir at a competitive price while staying within the project's green guidelines.

Now, instead of just flowing into Shuswap Lake, the rainwater from their roof and parking lot flows into a holding pond, through a bioswale and into the STORMAWAY System to be saved for landscape irrigation.

Project at a glance:

Project Name: Askew's Supermarket Stormwater Management System

Location: Salmon Arm, BC

Owner: Askew's

Consultant: Gentech Engineering Inc.

Distributor: Wolseley Waterworks, Kelowna, BC

General Contractor: Mounce Construction

Sector: Private Development

Product: STORMAWAY Stormwater Management Systems

Installation Time (start to finish):
Approximately 6 weeks

Atlantic Industries Limited

PROJECT PROFILE

This custom-designed, polymer-laminated system was comprised of three runs at 25.85 m in length and 2700 mm in diameter, with two custom-fabricated elbows and a T-section to bring all of the runs together. It also has a sump in the bottom with an irrigation pump and filtration system.
