16 Turn-Key Solutions

17 Global Reach

Innovative thinking has been the cornerstone of our success for over 55 years. As industry leaders, AIL Mining and The AIL Group of Companies are committed to product research and development, with solutions that are endorsed by engineers around the world.

Mining Portal, Northern Quebec, Canada - Super-Cor® Arch

Turn-key, value engineered solutions with a difference.

Staying competitive in today's economic climate means building in efficiencies from the ground up.

That's why many of the world's most successful mines and quarries use **efficient infrastructure solutions** from AIL Mining. We can help you save time and money in providing safe, practical work sites for your employees. By design, our custom solutions are **easy to ship and install** with minimal equipment and local labour, making them ideal for remote locations — even in the Arctic. Plus, with over 55 years of working closely with the global mining industry, our Technical Sales and Engineering teams are well-poised to deliver **turn-key, value engineered solutions** with a difference. AIL professionals will guide you through every phase of your project — assessment, design, specification, assembly, backfilling and testing — to ensure **successful project outcomes**.

AIL Mining's infrastructure solutions have been adding value to the world's most successful mine sites for over 55 years.

We support sustainable mine site development

AIL Mining recognizes the interdependence between social, environmental and economic sustainability, and we are committed to developing industry-leading sustainable infrastructure through:

Offering low global-warming potential solutions

- ▶ Steel infrastructure has a substantially lower life cycle carbon footprint than concrete
- ▶ Less energy is used in the production and shipping of steel infrastructure than concrete
- ▶ Our manufacturing facilities are substantially solar powered and The AIL Group is moving forward on our goal to be carbon neutral by 2050

Increasing the amount of materials which are reusable/recyclable

- ▶ Steel is the world's most recycled material* and many of our solutions have high recycled content
- ▶ Zinc used in galvanizing is a naturally occurring material and is 100% recyclable**

Reducing negative biodiversity impacts during construction and in-service, and regenerating the environment, where possible

- ▶ Wide span, open bottom structures reduce stream impacts and washout concerns
- ▶ Wildlife crossings and fish passages help maintain movement in habitat
- ▶ Reduced need for cast-in-place concrete on site
- ▶ Less effort to decommission steel infrastructure than concrete
- ▶ Some structures can be disassembled and reused

Understanding and improving our customers' life cycle costs

- ▶ Steel infrastructure provides significant savings on overall construction and life cycle maintenance, while still providing the same functionality as concrete

Providing solutions which minimize road closures during construction and while in service

- ▶ Steel infrastructure can be built in significantly less time than concrete, reducing disruption time, detours and construction schedules
- ▶ Steel structures require virtually no maintenance
- ▶ They are also more resilient to settlement, seismic events and climate change's extreme weather

Providing infrastructure solutions which increase user safety

- ▶ Buried metal bridge crossings typically provide wider, safer road widths
- ▶ Underground structures can be built from one side with THE EDGE Four-Flange Structural Liner

Making positive contributions to our communities

- ▶ Steel infrastructure uses non-specialized equipment and labour available through local contractors
- ▶ It also allows for optimal use of locally available fill material

Ultra-Cor® creates the world's largest and strongest structures.

With the introduction of Ultra-Cor®, AIL has taken engineered infrastructure to new dimensions in capability and performance. As the world's deepest corrugation profile, Ultra-Cor® combines all the advantages of lightweight construction with previously unheard-of strength and durability to create the largest and strongest corrugated steel plate structures available.

With an impressive 500 mm (19.6") pitch and 237 mm (9.5") depth, its ultra-large corrugations allow it to reach spans greater than 35 m (115') and support stockpile heights of over 30 m (98'). See page 12.

THE EDGE makes underground structures stronger, safer.

THE EDGE Four-Flange Structural Liner is an alternative to the traditional lapped connections that extends structural plate's application range and offers several key advantages. See pages 10 and 12.

GRS Bridges put the dirt to work.

AIL's Geotextile Reinforced Soil (GRS) Bridges were developed for resource industry sectors. They use steel anchor rods to connect a structural steel plate arch to the backfill/geotextile composite and transfers the loads into the surrounding GRS mass. See page 12.

From some of the world's largest heavy haul road arches and crusher walls to the smaller drainage and utilidor pipes, many of the world's most progressive mine operators use AIL Mining's efficient infrastructure solutions throughout their operations:

Across the Site | At the Plant | And Underground

Wetland or Wildlife Crossings

We offer a variety of solutions in Ultra•Cor®, Super•Cor®, Bolt-A-Plate® or Dur•A-Span® Structural Plate to suit many sizes and types of applications. Corrosion/abrasion-resistant Dur•A-Span® Structural Aluminum Plate is particularly well-suited to saltwater or aggressive environments. Geotextile Reinforced Soil (GRS) Bridges are exceptionally fast and economical resource road solutions. Open-bottom designs and our Prefabricated Bridges are effective, environmentally friendly solutions to preserve habitat.

Protection Structures

AIL's Protection Structures provide a protective barrier from overhead debris while also safeguarding your bottom line. Ultra•Cor® or Super•Cor® are recommended for larger applications and Bolt-A-Plate® for mid-size ones.

SPANS CAN EXCEED 35 m (115')

Northern Alberta - Super-Cor® Arch with MSE Wire Walls

Built without interruption to rail traffic

Australia - Super-Cor® Structures

Haul Road Crossings

Ultra-Cor®, the world's strongest structural steel plate, and Super-Cor® are natural solutions for larger engineered structures that need to withstand the heaviest of loads. For mid-sized structures, Bolt-A-Plate® is usually recommended. All are available in a wide range of shapes and sizes, including bottomless, fish-friendly arches.

Northern Alberta - Super-Cor® Arch with MSE Wire Walls

From site preparation to first train in 120 days

VIEW TIME-LAPSE VIDEO

Australia - Super-Cor® Arches with MSE Wire Walls

Road or Rail Underpasses

We recommend Ultra-Cor®, Super-Cor® or Bolt-A-Plate® according to the size, specifications and load factors for road or rail underpasses. All are virtually maintenance-free.

Saskatchewan - Super-Cor® Round with MSE Reinforced Bevels

Conveyor Tunnels and Overcasts

Our products have covered a lot of ground on these critical arterial applications. According to the required size and specifications, overcasts and conveyor tunnels can be made from various shape profiles in Super•Cor®, Bolt-A-Plate® or Corrugated Steel Pipe. In some cases, overcasts can incorporate utilidor-type passages to serve double duty.

Nevada - Bolt-A-Plate® Arch

Utah - Super•Cor® Arch

Northern Chile - Super•Cor® Arches with Best•Kote™ Coating

Drainage, Ventilation and Utilidor Systems

AIL Mining offers a full range of Galvanized, Aluminized Type 2 or Polymer-Laminated Corrugated Steel Pipe for virtually any mine site infrastructure requirement. In addition, we can supply all of the necessary elbows, couplings and access port accessories.

Fish Passage Solutions

Alaska - Custom Prefabricated Bridge

Nunavik - Modular Bridge System

Permanent or Temporary Bridges

Fast and easy, our Custom Prefabricated Bridges and Modular Bridge Systems come in a variety of widths and spans to handle heavy mining vehicles. Ideal for permanent or temporary applications, these bridges ship and install quickly in remote sites without the need for specialized bridge construction companies. Redeployable Modular Bridge Systems are also available as rentals.

Bolt-A-Bin® Abutments

Abutments

Our MSE Retaining Wall Systems and Bolt-A-Bin® System create cost-effective on-site abutments and walls. Bolt-A-Bin® is a cellular bin-type of retaining wall system available in a variety of sizes for vertical or battered applications.

MSE Wire Wall Abutments

Gabion Basket System

Safety Barriers

According to the needs of the site and safety regulations, we can provide our galvanized Guiderail System or Gabion Basket System.

Guiderail System

Stockpile and Load Out Tunnels

Another ideal application for our Structural Steel Plate is the stockpile tunnel. Depending on the planned pile height, Ultra•Cor®, Super•Cor® and Bolt-A-Plate® offer excellent strength and cost saving over other methods.

Integrated Hopper Frames

Northern Ontario - Super-Cor® Arch

Northern Ontario - Super-Cor® Arch with Reinforced Concrete

Northern British Columbia - Super-Cor® Arch

Northern Quebec - Super-Cor® Arch

Crusher Walls and Ramps

Perfect for remote mine sites, quarries or gravel pits with available fill material, these structures are easily constructed using our MSE Retaining Wall Systems. Made from heavy-duty galvanized wire, these interlocking wall and soil reinforcement systems provide easy, on-site construction solutions without the need for time-consuming concrete. They are also ideal for bridge or tunnel headwalls and wingwalls.

Iowa - MSE Wire Walls

British Columbia - MSE Wire Walls

Fort McMurray, Alberta - MSE Wire Walls

Maryland - MSE Wire Walls and Bolt-A-Plate® Arch

Louisiana - AIL Sound Walls, Silent Protector®

Sound Barrier Walls

When dealing with ambient mine site, quarry or gravel pit noise, AIL Sound Walls provide optimum performance. Easy to install, our Silent Protector® (Absorptive) and Tuf-Barrier® (Reflective) Sound Wall Systems are engineered for maximum noise mitigation. AIL Sound Walls are ideal for Mine/Quarry Perimeters, Haul Road Fencing, Crusher Fencing and Equipment Screens.

- ▶ 10 times stiffer and 5 times stronger than traditional steel liner plate
- ▶ Flanged seams instead of conventional plate overlaps
- ▶ Smaller crews needed, lower installed costs
- ▶ Available uncoated or with hot-dip galvanized or Best-Kote™ Coating Systems
- ▶ Grout coupling sizes and placement to suit site conditions
- ▶ Structures can accommodate Alimak rails/climbers or mine utility services
- ▶ Gaskets allow for leak-resistant structures
- ▶ Handles extreme loadings
- ▶ Accelerated assembly, easier fitting of plates
- ▶ Added safety, structures can be built from one side
- ▶ Suitable for field-applied coatings
- ▶ Custom fittings available
- ▶ Facilitates deflection angles
- ▶ Lower-cost tank storage option
- ▶ Structures can be dismantled and removed

Portals and Canopies

Specify Ultra-Cor® or Super-Cor® for larger-scale applications and Bolt-A-Plate® for mid-size ones. Each offers a wide variety of shapes and sizes to suit virtually any site or mine vehicle requirement. Your AIL Mining Technical Sales Representative can help you select the best solution for your needs.

Australia - Bolt-A-Plate® High Profile Arch

**IDEAL FOR REMOTE
NORTHERN LOCATIONS**

Nunavut - Super-Cor® High Profile Arch

South Africa - Super-Cor® Arch

Northern Quebec - Super-Cor® Arch

Mine Shafts, Vent Raises, Escape Ways

THE EDGE Four-Flange Structural Liner is ideal for creating underground structures such as mine shafts, ventilation raises and escape ways. THE EDGE is faster and more economical than continuous smooth steel or concrete alternatives. The resulting structures are strong, versatile and safer because they can be assembled from the inside.

Ground Support Structures

THE EDGE Four-Flange Structural Liner provides a safe and cost-effective addition for ground support in hazardous areas. Components transport easily to remote sites, where they can be assembled quickly and safely from the inside. Structures can be completely assembled and moved into an area of unsupported ground, or they can be assembled and advanced one section at a time. For added strength and support, fill material is pumped through grout couplings or ports.

Ultra-Cor® Structural Steel Plate

WIDER SPANS • HIGHER COVERS

- ▶ The world's strongest corrugated steel plate
- ▶ Ultra-deep corrugated and recommended for larger applications
- ▶ Handles extreme loadings
- ▶ Spans can exceed 35 m (115')
- ▶ Stockpile heights can reach greater than 30 m (98')
- ▶ Corrugation profiles of 500 mm (19.6") pitch x 237 mm (9.5") depth
- ▶ Available in: Ultra Low, Low or Standard Arches; and Box Structures
- ▶ Available with a variety of footing and headwall/wingwall options
- ▶ Available with tested and approved Best•Kote™ Coating Systems
- ▶ Designed and manufactured to National Standards at our third-party quality-certified facility ISO 9001-2015

- ▶ Structural Plate Arches and Bridges
- ▶ Grade Separations
- ▶ Road or Rail Underpasses
- ▶ Stream Crossings
- ▶ Box Culverts
- ▶ Heavy Haul Road Arches
- ▶ Stockpile Tunnels
- ▶ Portals and Canopies

Super-Cor® Structural Steel Plate

- ▶ Deep corrugated and recommended for medium-sized applications
- ▶ Handles extreme loadings
- ▶ Spans of up to 25 m (82')
- ▶ Corrugation profile of 381 mm (15") pitch x 140 mm (5.5") depth
- ▶ Available in: Low, Medium, Standard or High Profiles Arches; Box Structures; Rounds; and Vertical Ellipses
- ▶ Available with a variety of footing and headwall/wingwall options
- ▶ Available with tested and approved Best•Kote™ Coating Systems
- ▶ Designed and manufactured to National Standards at our third-party quality-certified facility ISO 9001-2015

- ▶ Structural Plate Arches and Bridges
- ▶ Grade Separations
- ▶ Road or Rail Underpasses
- ▶ Stream Crossings
- ▶ Box Culverts
- ▶ Heavy Haul Road Arches
- ▶ Stockpile Tunnels
- ▶ Storage Structures
- ▶ Portals and Canopies

THE EDGE Four-Flange Structural Liner

- ▶ 10 times stiffer and 5 times stronger than traditional steel liner plate
- ▶ Handles extreme loadings
- ▶ Built on Super-Cor® platform
- ▶ Accelerated assembly, easier fitting of plates
- ▶ Smaller crews needed, lower installed costs
- ▶ Added safety, structures can be built from one side
- ▶ Available uncoated or with hot-dip galvanized or Best•Kote™ Coating Systems
- ▶ Suitable for field-applied coatings
- ▶ Grout coupling sizes and placement to suit site conditions
- ▶ Custom fittings available
- ▶ Gaskets allow for leak-resistant structures
- ▶ Lower-cost tank storage option
- ▶ Structures can be dismantled and removed

- ▶ Mine Shafts
- ▶ Vent Raises
- ▶ Escape-Ways
- ▶ Portals and Canopies
- ▶ Ground Support Structures
- ▶ Relining of Existing Structures
- ▶ Road or Rail Underpasses
- ▶ Heavy Haul Road Arches
- ▶ Stockpile Tunnels
- ▶ Protection Structures

Bolt-A-Plate® Structural Steel Plate

- ▶ Standard corrugated and recommended for smaller applications
- ▶ Spans of 1.5 m (5') to 10 m (33')
- ▶ Corrugation profile of 152.4 mm (6") pitch x 51 mm (2") depth
- ▶ Available in: Low, Standard or High Profile Arches; Rounds; Horizontal or Vertical Ellipses; Pipe Arches; and Pear Shapes
- ▶ Available with a variety of footing and headwall/wingwall options
- ▶ Available with tested and approved Best•Kote™ Coating Systems
- ▶ Designed and manufactured to National Standards at our third-party quality-certified facility ISO 9001-2015

- ▶ Structural Plate Arches and Bridges
- ▶ Grade Separations
- ▶ Road or Rail Underpasses
- ▶ Stream Crossings and Fish Passages
- ▶ Heavy Haul Road Arches
- ▶ Stockpile and Escape Tunnels
- ▶ Portals and Canopies
- ▶ Culverts
- ▶ Storage Structures
- ▶ Utilidor Systems
- ▶ Conveyor Tunnels and Overcasts

Dur-A-Span™ Structural Aluminum Plate

- ▶ Corrosion/abrasion-resistant for aggressive soil and saltwater applications
- ▶ Lightweight and strong
- ▶ Performance proven in over 15,000 installations worldwide
- ▶ Spans of up to 12.2 m (40')
- ▶ Corrugation profile of 230 mm (9") pitch x 64 mm (2.5") depth
- ▶ Available in: Standard or High Profile Arches; Box Structures; Rounds; Horizontal Ellipses; and Pipe Arches
- ▶ Available with a variety of footing and headwall/wingwall options
- ▶ Designed and manufactured to National Standards at our third-party quality-certified facility ISO 9001-2015

- ▶ Saltwater and Aggressive Applications
- ▶ Stream Crossings and Fish Passages
- ▶ Culverts
- ▶ Road Salt and Other Storage Structures

Geotextile Reinforced Soil (GRS) Bridges

- ▶ Pre-engineered soil bridges — fast, economical and fish/wildlife-friendly
- ▶ Transfers loads from soil arch to surrounding GRS mass
- ▶ Maintains existing stream bed
- ▶ No need for concrete footings or pile foundations
- ▶ Lightweight, ships economically to site
- ▶ Rapid installation
- ▶ Allows for wide range of backfills
- ▶ Ideal for remote locations
- ▶ Low maintenance costs
- ▶ Scour- and piping-resistant
- ▶ Improved user safety
- ▶ Supports off-road haul trucks and mining shovels
- ▶ Spans up to 16 m (52.5')
- ▶ Bridge Abutments
- ▶ Available with tested and approved Best•Kote™ Coating Systems

- ▶ Resource Road Crossings
- ▶ Stream Crossings
- ▶ Fish Passages
- ▶ Environmentally Sensitive Areas

Easy to ship and install.

Long-lasting and virtually maintenance-free, AIL Mining's corrugated metal structures ship and install quickly and economically, with minimal equipment and labour requirements. Our technical teams will guide you through the complete project to ensure its success.

Precast or cast-in-place concrete footings are set over the prepared site.

The first arch segment is completely assembled on the ground.

It is then lifted into place and bolted to the footings on either side. In most cases, a boom truck is sufficient for this.

The segments bolt into base channels integrated into the concrete.

Plates then attach individually to make up other arch segments.

If specified, reinforcement ribs are then added.

Layers of engineered backfill are added in sequential lifts.

The road surface is then completed with safety barriers.

Custom Prefabricated Bridges

- ▶ Permanent or temporary applications
- ▶ Strong: able to withstand heavy-duty loading
- ▶ Spans up to 73 m (240'), most economical between 40 m (130') and 73 m (240')
- ▶ Widths up to 11 m (36')
- ▶ 10.8 cm (4.25") corrugated steel deck is standard
- ▶ Decking options – poured or precast concrete, asphalt, grating, wood or gravel
- ▶ Weathering, Galvanized or Painted Steel
- ▶ Bearing plates and pads
- ▶ Curb or rail system
- ▶ Excellent fish passage solutions
- ▶ Sidewalks and utility corridors can be added to enhance use

- ▶ Stream Crossings
- ▶ Road or Rail Overpasses
- ▶ Detour Bridges

Modular Bridge Systems

- ▶ Robust and reusable “quick-build” bridges for sale or rent
- ▶ Inventoried components ready to ship and install quickly by local crews
- ▶ Can be launched from one side without lifting equipment ▶ Permanent or temporary applications
- ▶ Easy to dismantle, store and reconfigure for multiple uses ▶ Strong: able to withstand heavy-duty loading
- ▶ Variety of widths, spans of over 100 m (328') ▶ Galvanized finish ▶ Variety of decking options
- ▶ Bearing plates and pads ▶ Excellent fish passage solutions ▶ Sidewalks and utility corridors can be added

- ▶ Stream Crossings
- ▶ Road or Rail Overpasses
- ▶ Detour Bridges
- ▶ Utility Corridors

MSE Retaining Wall Systems

- ▶ Economical system for retaining walls, steepened slopes and erosion control
- ▶ Heavy-duty, black or galvanized, steel wire interlocking wall and mat construction
- ▶ Can handle extreme surcharge loads ▶ Available finishes: natural stone, temporary (fabric), shotcrete or vegetated
- ▶ Permanent or temporary applications ▶ Wall heights can exceed 30 m (100')
- ▶ Height increments are 610 mm (2') ▶ Adapts to curves, angles and steps
- ▶ Time-saving Track-Strip® Soil Reinforcement System made from durable galvanized steel

- ▶ Crusher Ramps and Walls
- ▶ Retaining Walls
- ▶ Headwalls and Wingwalls
- ▶ Bridge Abutments
- ▶ Grade Separations

Bolt-A-Bin® Cellular Bin-Style Retaining Walls

- ▶ Cost-effective, strong and versatile for mine site or quarry cribwalls or bridge abutments
- ▶ Lightweight, easy to install and ideal for remote areas ▶ Galvanized and Aluminized Type 2 steel construction
- ▶ Size range of 1.2 m (4') to 8.5 m (28') in height, in 3 m (10') increments in length
- ▶ Full design and engineering support

- ▶ Reclaiming or Stabilizing Slopes
- ▶ Protecting Shores
- ▶ Preventing Erosion
- ▶ Road Widening
- ▶ Headwalls and Wingwalls
- ▶ Loading Platforms or Ramps
- ▶ Wharves ▶ Barricades
- ▶ Barricades ▶ Blast Walls
- ▶ Cut-Off Walls

AIL Sound Walls

- ▶ Lightweight and durable PVC construction ▶ Interlocking tongue and groove connection ▶ Quick and easy to install
- ▶ Lower installed costs ▶ Sustainable and low maintenance ▶ Will not rust, rot or stain
- ▶ Impervious to rain, snow and ice ▶ Unaffected by de-icing salts ▶ Wind load tested for hurricane-force winds
- ▶ Meets accelerated test requirements for durability ▶ Designed to meet applicable design codes (AASHTO, IBC, CSA)
- ▶ Meets ASTM F3459-21 Standard Specification for PVC Exterior Profiles used for Sound Walls
- ▶ Adaptable to different footing systems ▶ Available as Silent Protector (Absorptive) or Tuf-Barrier (Reflective)

- ▶ Mine/Quarry Perimeters
- ▶ Haul Road Fencing
- ▶ Crusher Fencing
- ▶ Equipment Screens

Corrugated Steel Pipe

- ▶ Economical, strong, lightweight and easy to install ▶ Variety of sizes, thicknesses and materials
- ▶ Complete line of standard and specialized fittings and accessories ▶ Available in Round or Pipe Arch Profiles
- ▶ Can be used to reline existing systems

- ▶ Culverts
- ▶ Drainage Systems
- ▶ Stormwater Systems
- ▶ Fish Passages
- ▶ Conveyor Tunnels and Overcasts
- ▶ Ventilation Systems
- ▶ Utilidor Systems

Gabions

For safety barriers, steepened slopes and erosion control, these strong, lightweight galvanized steel mesh baskets hold face alignment with machine filling.

Geotextiles

Woven and non-woven Geotextiles for soil stabilization and reinforcement, erosion control, drainage, filtration, separation and other needs.

Guiderail System

Ideal for road dividers and barriers, bridge approaches and railings, curves and other hazards.

Steel Sheet Piling

Roll-formed with a continuous, positive interlock, AIL's Steel Sheet Piling is stronger and easier to drive. Accessories available.

MSE Wire Walls

Ideal for mine sites and quarries, Wire Walls provide fast, flexible embankment protection for both temporary and permanent applications. Wire Walls easily accommodate curves, angles or steps, culverts, bridge piles or other site requirements.

Starter wire face is installed on a compacted base.

Track-Strip® Soil Reinforcement System added.

Backfill added over first course of reinforcement.

First fill lift with fabric and select stone above grade.

Track-Strips® slip over verticals in wire face.

Repeat previous steps for additional lifts.

Track-Strip® System can skew around obstructions.

Then safety barrier and road surface added.

The Track-Strip® Soil Reinforcement System

- ▶ Simplifies wall installations
- ▶ Saves time and money on labour and materials
- ▶ Easily accommodates obstructions and geometric constraints

Installation

Streamline your next project with an AIL Mining turn-key solution.

AIL Mining's integrated approach delivers design, manufacturing and construction services under one contract with a single point of responsibility.

Minimize your project risk and tighten the delivery schedule.

This system is used to minimize the project risks for the owner and tighten the delivery schedule by overlapping the design and construction phases of a project.

The AIL Mining turn-key solution benefits:

- ▶ **Faster Delivery:** AIL Mining's collaborative project management means work is completed faster and with fewer problems.
- ▶ **Cost Savings:** Our integrated team is geared toward efficiency and innovation.
- ▶ **Better Quality:** We meet performance needs and not just minimum design requirements — often developing innovations that result in a better project.
- ▶ **Simplified Communications:** One entity is held accountable for cost, schedule and performance.
- ▶ **Decreased Administrative Burden:** Owners can focus on the project rather than managing separate contracts.
- ▶ **Reduced Risk:** The AIL Mining Team assumes additional risk.

How do you benefit?

- ▶ **Higher Profit Margin:** Our integrated team is fully and equally committed to controlling costs.
- ▶ **Decreased Administrative Burden:** Our approach streamlines communication between parties.
- ▶ **Increased Market Share:** More mine owners are choosing turn-key solutions as the preferred approach.
